

Electrivire'25: Secure The Sound!

Instructions:

1. The diagram for the circuit you need to create is provided above, along with a high-resolution PDF link [here](#). A full circuit diagram will be added to this document **here** 30 minutes into the competition, in the first half hour you must attempt to use the internet and any other resources to figure out the circuit, understand it and get a head start on building it. The first half of this session (10:00 am to 12:00 pm) will be dedicated to making the circuit. After this point you should approximately be done with the hardware, and will move on to the programming section for the next hour, till 1pm.
2. There will be a 30 minute lunch break, till 1:30pm, after which the competition will resume.
3. The second half of this session (1:30 pm to 2:30 pm) will be dedicated to finishing programming the ESP32 using the provided boilerplate code, which you need to complete, to work with the hardware and deliver a functional volume meter. The file to code is linked
[Boiler Plate Final](#)
4. You must complete both tasks as quickly as possible to win, and you will be judged and awarded points based on the functionality of your hardware, as determined by the software.
5. Partial marks are available in case you are unable to complete the hardware/software fully.
6. If you ask for help during the competition, 0.25 marks will be deducted every time you ask for help. This is only for help with the logic of the circuit, such as assistance with connecting an entire part, like the mic module. No marks will be deducted if you are seeking help regarding possible defective electronics or assistance with physically fitting a pin into a slot.
7. Winners will be determined based on this point-based grading system, with a maximum of 9 marks that can be awarded. In

the event of a tie, winners will be decided based on the time of completion and the cleanest hardware setup.
